

The global burden of neglected zoonotic diseases: current state of evidence

Carlotta DI BARI, Narmada VENKATESWARAN, Christina FASTL, David M. PIGOTT, Brecht DEVLEESSCHAUWER

Carlotta.dibari@Sciensano.be

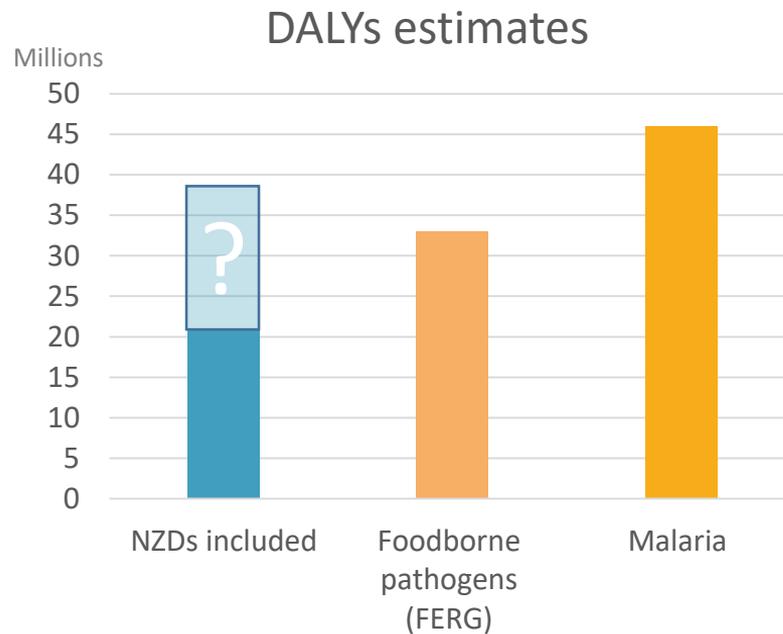

Prioritization vs. Estimates

- Anthrax: for 65 countries was a priority, 1 national study
- Rabies: for 94 countries was a priority, 11 studies
- Campylobacter: for 5 countries was a priority, 21 studies
- Toxoplasmosis: for 7 countries was a priority, 15 studies

NZDs and DALYs

- 17 NZDs included in the DALYs estimates
- How many DALYs are missing?
 - Bigger initiative to help understand the «real» burden
 - Enhance comparison and embrace the complexity of these diseases

Take home messages

- Mismatched between prioritization and findings
- Broadening the scope of existing projects
- Discover the real burden of NZDs
